

3DEXPERIENCE®

FROM DESIGN REVIEW TO CHANGE

Focus on the web capabilities

DS DASSAULT
SYSTEMES | The 3DEXPERIENCE® Company

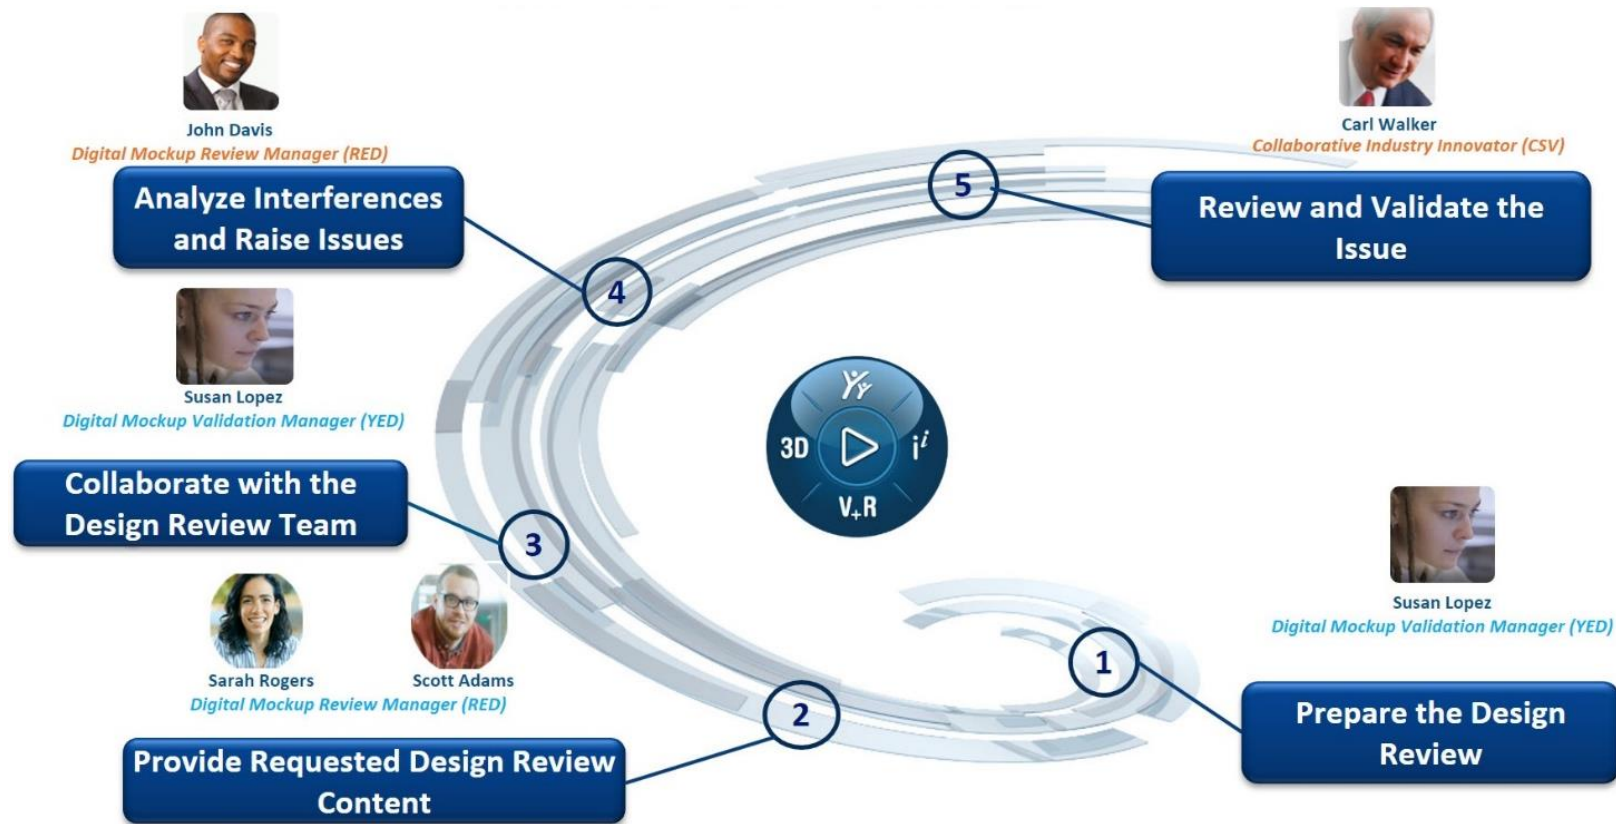

COLLABORATIVE DESIGN REVIEW

Design reviews are important activities that contribute to the accuracy of the design work.

The 3DEXPERIENCE platform provides several roles and applications (native / web) to support efficient design review processes and collaboration.

	Role	Native / Dashboard
1/2	Collaborative Industry Innovator (CSV)	Native/Dashboard
1	Digital Mockup Review Engineer (DRN)	Native
2	Digital Mockup Validation Engineer (DEY)	Native
3	Digital Mockup Review Manager (RED)	Dashboard
4	Digital Mockup Validation Manager (YED)	Dashboard

DESIGN REVIEW PROCESS, DASHBOARD

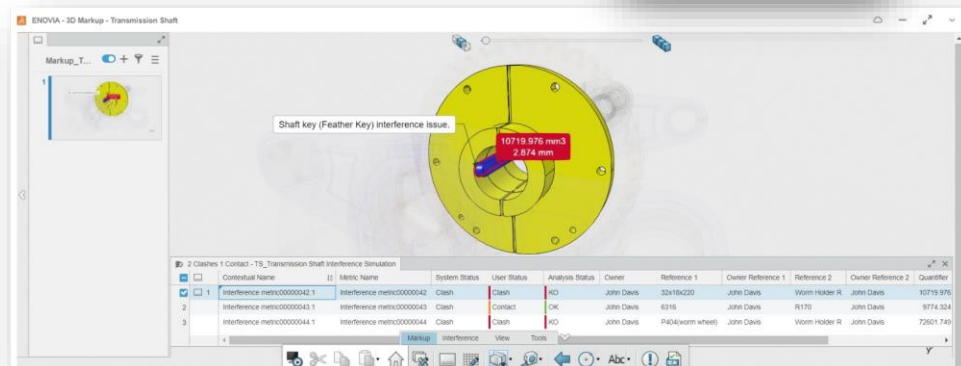

COLLABORATIVE INDUSTRY INNOVATOR 1/2

Collaborative Industry Innovator – CSV provides the “3D Markup” app that enables a design review on web for multi-CAD product structures.

- This app delivers the following main capabilities:
 - Markup creation and review
 - Measure items, the distance between items, or thicknesses.
 - Cut through objects using a section plane.
 - Annotate objects using different types of annotations.
 - Create and play slides displaying specific states of the markup.

COLLABORATIVE INDUSTRY INNOVATOR 2/2

Collaborative Industry Innovator role provides also a set of apps that can help you collaborate around your design reviews:

	App	Main capabilities
1	Collaborative Tasks	Provides an intuitive user experience for simple task management (Without the need to create a project)
2	Issue Management	Enables a creation of issues that define problems to be resolved or functionality that needs to be investigated or improved
3	Change Action	Provides a formal change process that combines users, proposed changes, realized changes, attachments etc.

When creating a 3D Markup, you can directly raise an issue and/or a Change Action from the Markup itself. When both issue and Change Action are created from the same Markup, the Change Action is automatically linked to the Issue as “Resolved By” which streamlines the Issue definition.

NEW!

Validation
Management

NEW ROLE: DIGITAL MOCKUP VALIDATION MANAGER

R2022x GA

Improve quality, reduce cost and time to market by effective management of the complete Digital Mockup review process

Apps

- 3D Annotation insight
- Design Validation
- Interference Simulation
- Validation Management

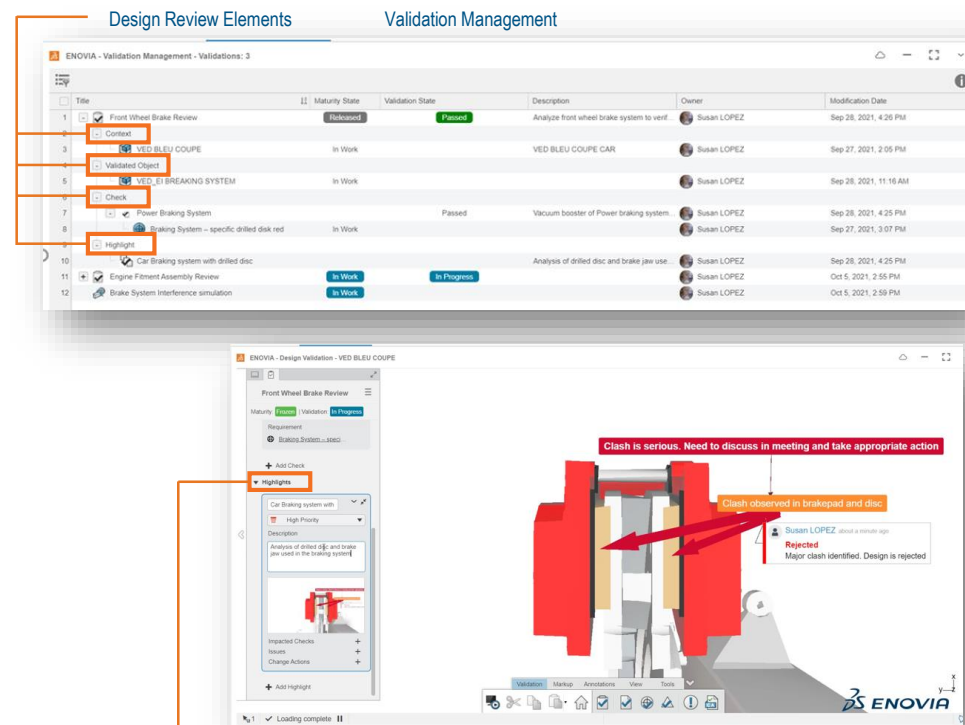

Roles

- ✓ Digital Mockup Validation Manager (YED)

- The new role **Digital Mockup Validation Manager (YED)** enables users to validate virtual prototype & resolve issues by enabling formal management of the complete Digital Mockup review process using web browser.
- This new role provides the following benefits to the user:
 - Define and Manage all the elements of the design review process such as context, validated objects, checks, highlights, markups.
 - Validate review details in the slides and add appropriate stamp (Validated/Rejected). Create a Formal Issue and/or Change Action
 - Get real-time access of all the review elements and their Maturity/Validation status.
 - Define interference simulation details, context, specification, and initiate the simulation.
 - Visualize interference simulations stored in the 3DEXPERIENCE platform and update their User Status and Analysis Status.

Note:

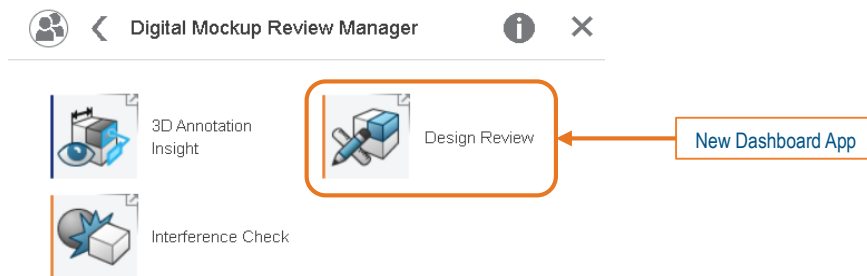

The role Digital mockup Validation Engineer (DEY) is still needed to compute interference simulation

NEW DASHBOARD APP: DESIGN REVIEW

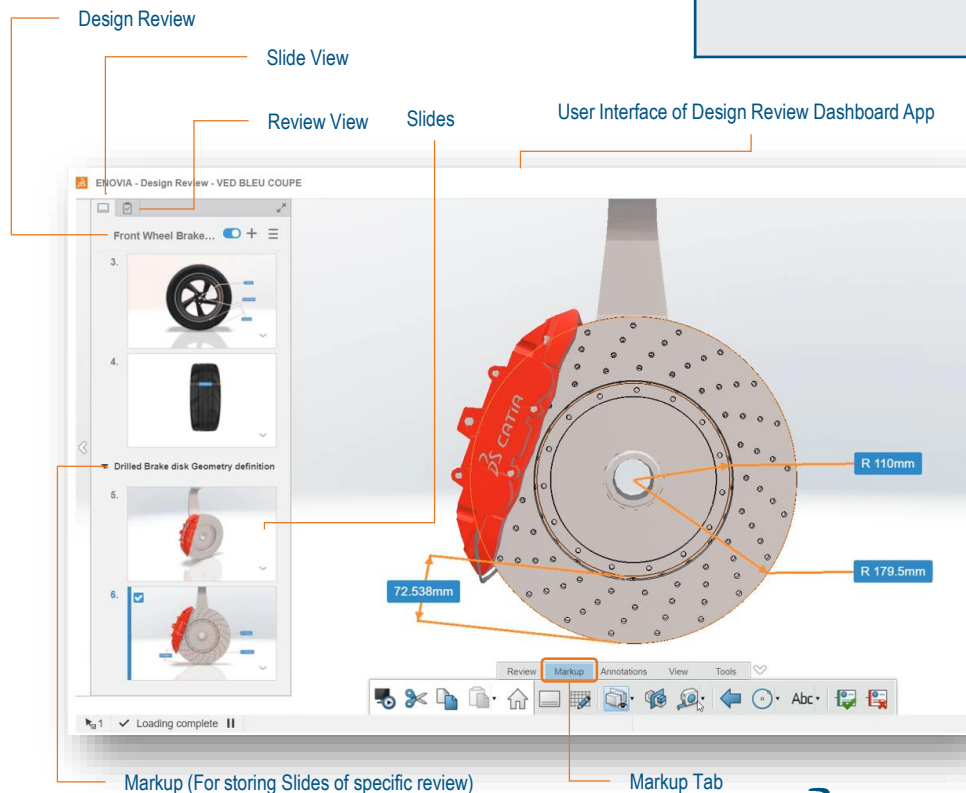

Improve quality of your design by collaborative design review from anywhere and on any device

R2022x GA

Apps	<input type="checkbox"/> Design Review Dashboard App
Roles	<input checked="" type="checkbox"/> Digital Mockup Review Manager (RED)

- This new dashboard app lets you manage reviews and markups from anywhere and on any device.
- Following are the major capabilities of this app:
 - Create new reviews, slides, measures, and sections.
 - Create markers such as picture markers, text markers, and labels.
 - Compare review objects and drawings.
 - Read validated objects, checks, and highlights.
- Following are the two intuitive interfaces provided with this app:
 - **Review View:** This provides a global overview of the review content. You can navigate through reviews, highlights, and checks.
 - **Slide View:** This view displays the markups under the review and the slides created under these markups

- You can now create a reply to a markup slide. The new reply slide is added under the main slide.
- The photo and name of the creator is also added on the top of reply slide thumbnail.

Note:

- Reply slides are sorted based on their creation date
- A "Highlight" icon is added on top of the preview if the slide is pointed by a highlight
- If the width of the review panel is sufficient to accommodate more than one column, then:
 - Markup slides and slide replies are displayed horizontally for each markup
 - A blue line is displayed between a markup slide and its replies.

VALIDATED/REJECTED STAMP MARKERS

R2022x GA

Apps	<input type="checkbox"/> Design Review Dashboard App
Roles	<input checked="" type="checkbox"/> Digital Mockup Review Manager (RED)

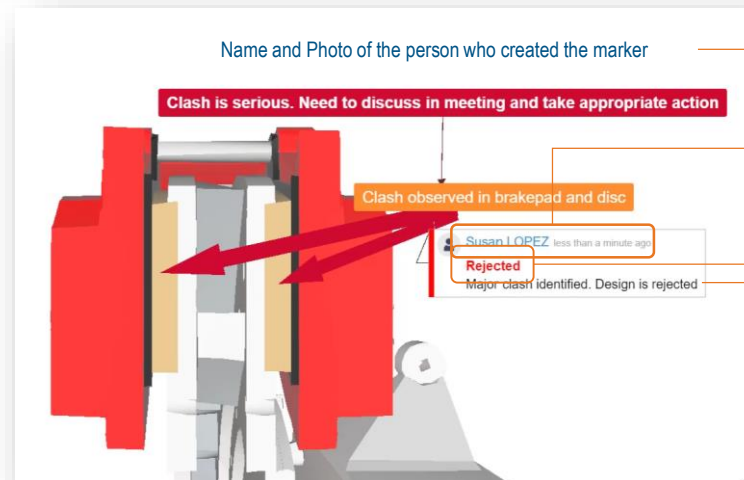

Enhanced collaboration with effective use of appropriate stamp markers

- You can now add visual stamp markers (Validated/Rejected) to clearly communicate the result of the analysis to other collaborators.
- A stamp marker contains the following information:
 - Marker (Validated/Rejected) based on your selection
 - Name and photo of the person who created this marker
 - Date of the marker creation
 - Additional comment to document more details
- Once marker is created, the following information cannot be changed:
 - Validation type
 - Name of the creator
 - Date when the marker is created
- The comment can be edited or removed. Also, all the graphic properties, leader pointing position, and box position can be customized after the marker creation.

3D MARKER RESPONSIVE DISPLAY

Improved visibility decluttered display while viewing markups

- You can now use the new **3D Marker Responsive Display** command available in the **View** section of the action bar.
- This option enables the responsive display of markers. When selected, it hides the 3D markers when zooming out, and displays them again when zooming in.
- The opacity of the 3D Markers is also modified based on the current viewpoint ensuring that the view is not overcrowded and unreadable when you zoom out.
- This option is unselected by default.

COMPARE TOOL AVAILABLE IN THE SLIDES

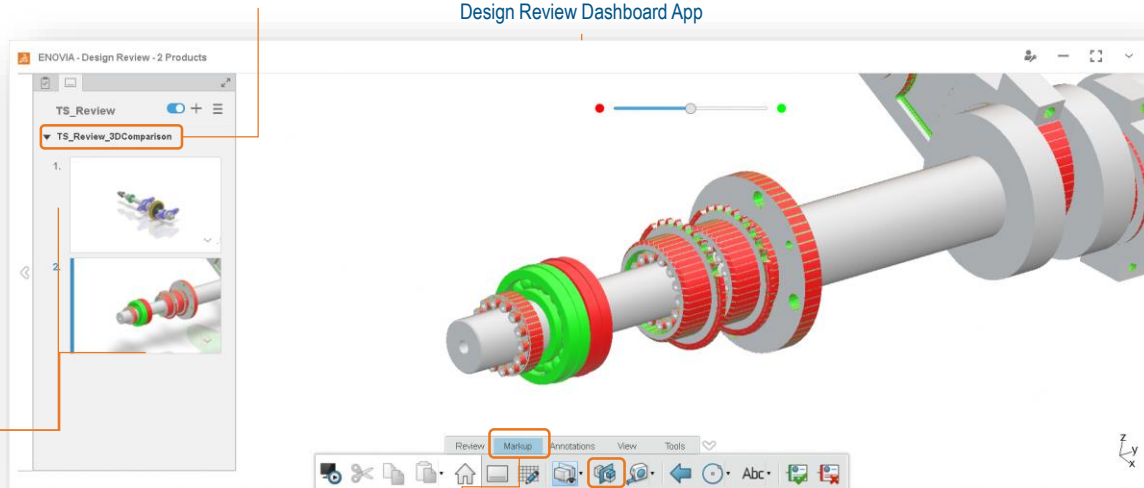

Improved efficiency and collaboration by comparing products and storing the results

- You can now use the **3D Compare** option to visually compare two products, two parts or two revisions of the product, and store the comparison result in a slide.
- The geometries are displayed as follows:
 - Those of the first part or product are displayed in **red**
 - Those of the second product or part are displayed in **green**
 - The common geometries are displayed in gray

Enhanced app

NEW WIDGET: CHANGE GOVERNANCE (CR/CO)

R2022x GA

Orchestrate an effective change governance processes with new Change Request/Order widgets

Apps	<input type="checkbox"/> Change Manager
Roles	<input checked="" type="checkbox"/> Change Manager (CHG)

- A new widget “Change Governance” is available now and allows the review and creation of:
 - Change Requests
 - Change Orders
 - Change Actions
- New content is introduced in the Change Request/Impact Analysis:
 - Affected Items (in CR)
 - Change orchestration (in the CR)
 - Analysis Basis (in the Impact Analysis)
 - Impacted Items (in the Impact Analysis)

The diagram illustrates the Change Governance widget and its sub-widgets. The Change Governance widget is shown at the top left, with an arrow pointing down to the Change Request widget. The Change Request widget is shown in the middle, with an arrow pointing down to the Change Order widget. The Change Order widget is shown at the bottom right. The Change Request widget is titled "02 Transmission Enhancements" and has a maturity state of "Completed". It includes sections for "Affected Items", "Impact Analysis", "Change Orchestration", "Members", and "Approvals". The Change Order widget is titled "Assembly modification 100" and has a maturity state of "Draft". It includes sections for "Change Orchestration", "Members", and "Approvals".

Change Governance

Use change governance to request, evaluate and implement your changes.

- The Change Request has a new attribute “Analysis Type” that can have one of the following values:
 - Simple
 - The Change Request can be submitted for approval even if the Impact Analysis is not in state “Frozen”
 - In this case, the system will automatically promote the Impact Analysis to “Frozen”
 - Detailed
 - The Change Request can not be submitted for approval if the Impact Analysis is not in state “Frozen”
- When the Change Request is “Approved”, all Impact Analysis will be promoted to “Completed”
